

## CONTENTS OF VOLUME 5

## NUMBER 1-2

|   |     |
|---|-----|
| A. BALČYTIENĖ, E. LEHTINEN. Hypertext and learning:<br>an overview . . . . .  | 3   |
| G. DZEMYDA, V. ŠALTENIS. Multiple criteria decision support<br>system: methods, user's interface and applications . . . . .                         | 31  |
| G. GRIGAS. Algorithms and programs as different items in<br>learning of computer programming . . . . .  | 43  |
| V. KAŇKOVÁ. On the stability in stochastic programming –<br>generalized simple recourse problems . . . . .  | 55  |
| A. KAPUSTINSKAS. Some properties of the quasihomogeneous<br>autoregressive random fields . . . . .  | 79  |
| K. KAZLAUSKAS. Characteristics of linear periodically time-<br>varying systems . . . . .  | 98  |
| J. MICHÁLEK. A simple test for tracking the regular behaviour<br>of a technological process . . . . .   | 110 |
| A. MOCKUS, J. MOCKUS, L. MOCKUS. Bayesian approach<br>adapting stochastic and heuristic methods of global and<br>discrete optimization . . . . .    | 167 |
| J. MOCKUS. Optimization problems in simple competitive<br>model . . . . .   | 123 |
| A.-M. MONTVILAS. Discrete sequential detection of abrupt or<br>slow multiple changes in several unknown properties of<br>random processes . . . . . | 175 |
| R. PUPEIKIS. On-line estimation of dynamic systems<br>parameters in the presence of outliers in observations . .                                    | 189 |
| V. TIEŠIS, S. MASKELIŪNAS, M. SKURIKHINA. The<br>investigation of two competitive systems . . . . .   | 211 |
| S. VALTERIS. Autoregressive models of 2D random fields .  | 231 |
| V. VYŠNIAUSKAS. Searching for minimum in neural networks  | 241 |
| Instructions to Authors . . . . .   | 256 |

|  |     |
|--|-----|
| C.F. ALASTRUEY, J.R. GONZÁLEZ DE MENDÍVIL,<br>F. ARJOMANDI. Modelling, simulation and control for<br>integro-differential systems with delays by using associated<br>systems . . . . . | 261 |
| A. BUITKUS, A. ČAPLINSKAS, R. MARKEVIČIUS.<br>LITHUANIA 2000: strategy for Lithuanian national<br>information infrastructure – approach and specific features                          | 283 |
| R. ČIEGIS, K. KIŠKIS. On the stability of LOD difference<br>schemes with respect to boundary conditions . . . . .  | 297 |
| A. KAPUSTINSKAS. Parameters estimation of quasihomo-<br>geneous autoregressive random fields . . . . .   | 324 |
| H. KURYLA, J. MOCKUS. Solving differential equations<br>by event driven techniques for parameter optimization . .  | 338 |
| A. LAURINAVIČIUS. A simulation of microprocessor systems<br>for parameter measurements of thermophysical processes   | 351 |
| R. MATHAR, A. ŽILINKAS. On channel access probabilities<br>which maximize throughput of slotted ALOHA . . . . .  | 364 |
| D. PETCU. A parallel algorithm for stiff ordinary differential<br>equations . . . . .  | 373 |
| M. de la SEN. Stability and the matrix Lyapunov equation for<br>differential systems with point, distributed and/or mixed<br>point-distributed delays . . . . .                        | 385 |
| A. SHIMOLIUNAS. Restoration of an entire epicortical<br>electrocorticogram from a spatially sampled<br>electroencephalogram . . . . .  | 414 |
| V. ŽILEVIČIUS, A. MISEVIČIUS. Optimization aspects<br>relatively to placement of components of gate array VLSI   | 439 |
| Contents of volume . . . . .   | 455 |
